## FROM MILESI SANITIZING FINISHES FOR SAFE SURFACES FOREVER

■ From the technological research **Milesi**, brand of the **IVM Group** brand of the multinational group **IVM** specialized in the production of wood coatings, **Healthy.Wood** is the new line of sanitizing coatings that provide surfaces with absolute and lasting protection against bacteria, without resorting to use of disinfectant products. Laboratory tests have shown that Healthy.Wood sanitizing coatings allow to inhibit bacterial proliferation over 99.9%, guaranteeing the maximum level of hygiene and protection of surfaces, while maintaining their aesthetic characteristics unchanged.

Healthy.Wood is ideal for all those environments where hygiene is an indispensable requirement: from domestic spaces such as kitchens, bathrooms, children's rooms, or to all public places such as bars and restaurants, cinemas, hotels, schools, shops, spaces trade fairs, medical and professional offices. Healthy.Wood can be used for objects that frequently come into contact with humans and that need to be sanitized: glasses, children's games, etc.

The strong disinfectant power of silver, the heart of the formulation, in combination with the innovative technology developed in the Milesi Research Laboratory, has allowed us to create a wide range of finishes and finishing coats with extremely innovative sanitizing and sanitizing properties.

The sanitizing particles are integrated directly into their formulation: this ensures that they are distributed evenly.

The painted surface is thus perfectly resistant to bacteria in all its parts.

By not evaporating, their sanitizing action lasts forever, even on frequently cleaned surfaces with detergents, even particularly aggressive ones.

The surfaces treated with Healthy.Wood sanitizing coatings make the use of disinfectants superfluous.
